

# Guidelines for the Blood Transfusion and Tissue Transplantation Services in the UK

Last updated on 23 May 2025

## Annex 1. NIBSC standards available from MHRA

MHRA South Mimms Laboratories, formerly the National Institute for Biological Standards and Control (NIBSC), produces a wide range of standard materials, available as World Health Organization (WHO) international standards, WHO reference reagents and NIBSC brand standards.

Many are pertinent to transfusion medicine such as serological, virological, bacteriological and coagulation standard preparations.

A list of available standards is available on the [NIBSC website](#).

Please note that alternative preparations may be available from other manufacturers.
